

Navagis GeoSmart leverages Google Maps to provide front end visualization and geospatially enable business operations. It serves as the middleware to integrate your Oracle, IBM, SCADA, and other enterprise data points into a map powered common operating picture.

### Key Benefits & Features

- ◆ Overlay Oracle and IBM on Google Maps (i.e. Oracle WAM, CC&B and IBM Maximo)
- ◆ Visualize massive data sets
- ◆ Integrate GIS with asset and customer information
- ◆ Overlay custom hi-res and infrared imagery
- ◆ Analyze customer trends
- ◆ Easily distribute / sync data across teams
- ◆ Measure distance and find shortest paths
- ◆ Map driven asset management
- ◆ Manage field technicians
- ◆ Improve data quality and integrity

### Who is Navagis?

Navagis is a global Location Intelligence company that empowers enterprise organizations to run their business and operations via web and mobile mapping applications. Navagis offers industry specific software solutions and professional development and consultation services. Navagis is an Oracle Gold and Google for Work Premier Partner with headquarters in San Francisco and offices in Mississippi, Singapore, Philippines and Japan.

Partner

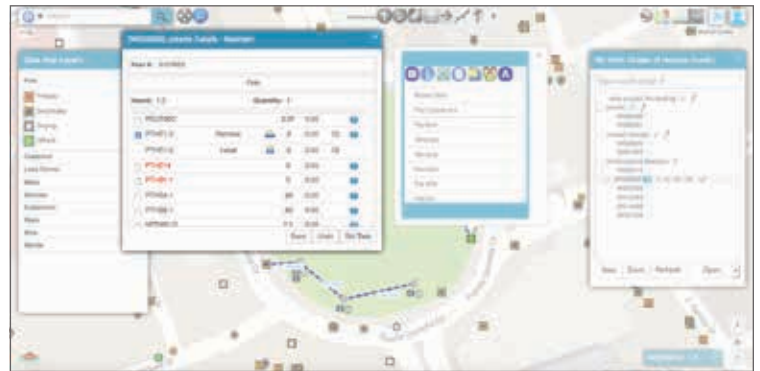

## Powerful Asset Mapping

Visualize massive vector data sets (points, lines, polygons) and overlay custom imagery. Search using location, find shortest paths, and annotate data on the map. Manage an unlimited number of layers and assets. Visualize utilization and see finer granularity in area level information extraction.

## Asset Design & Integrity

Create workspaces and jobsites; install, maintain, replace, relocate, and remove assets; see work order summaries and design logs. Use the map for approvals. Visualize improper locations then click and drag to make corrections. Automatically updates backend data system.

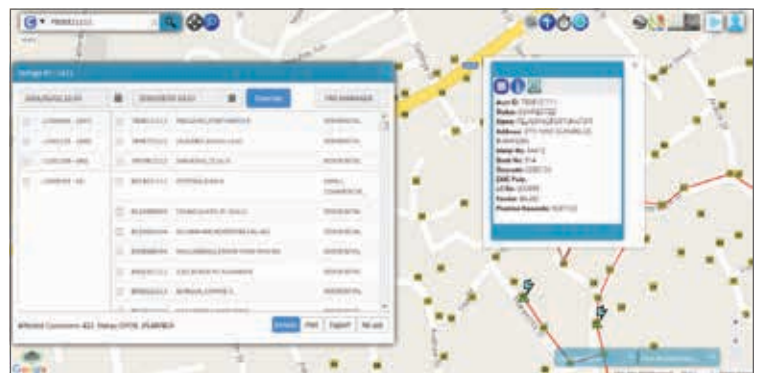

## Line Management

Vegetation tools that utilize infrared imagery, export information, and upload photos. Set trimming cycle and associate impacted wires. Circuitry tools to string wires to live and proposed jobsites. Visualize upstream and downstream from a load center / wire section. Tap and untap wires.

## Customers & Outages

Visualize your entire customer database. Locate customers serviced by an asset and retrieve customer details and consumption. View both planned and unplanned outages. Visualize impacted customers dynamically via user defined polygons and load centers.
